

CLIENT-FACING PROPOSAL

Australian hosting, support and infrastructure for businesses that need speed, reliability and real people behind the service.

DreamIT Host is positioned as a Melbourne-led hosting and managed services business serving Australian organisations with web hosting, email, reseller, VPS, CDN and support capabilities backed by local service and performance-focused infrastructure.

100%

Australian owned and operated, with local support publicly based in Melbourne.

2014

Origins in DreamIT Solutions, with DreamIT Host launched in 2016 after early web design and hosting demand.

24/7

Australian ticket support, with ticket, live chat and phone support pathways published on the business website.

Executive summary

What DreamIT Host is

DreamIT Host presents itself as an Australian hosting provider built for small to mid-sized businesses, agencies, eCommerce sites and higher-traffic websites that want performance, local support and a broader service stack than commodity budget hosting.

The public offer spans web hosting, email hosting, reseller hosting, VPS and managed server options, domains, backups and a premium CDN layer.

Where it differentiates

The clearest positioning themes are Australian ownership, Melbourne-based support, free migrations, performance-oriented infrastructure, DirectAdmin and LiteSpeed based hosting, and a customer experience designed for businesses that do not want offshore-only support.

Web hosting

Proposal angle: DreamIT Host is a good fit for customers who want Australian hosting with accessible support, migration help, and a stronger service relationship than a generic low-touch provider.

Business overview

Area	Publicly stated position	Why it matters to clients
Ownership and team	DreamIT Host states it is 100% Australian owned and operated, with customer support based in Melbourne. The About page also names CEO Jamie Le and COO Abs Bahloul.	Clients looking for local accountability can see a named leadership team and a support location within Australia.
Core services	Web hosting, email hosting, reseller hosting, VPS, managed server pathways, domains, CDN and backups.	This gives customers a single provider path from entry hosting to more serious infrastructure needs.
Support model	24/7 Australian ticket support, live chat, and published phone support windows.	Support access is a major differentiator when businesses need fast answers during incidents or migrations.
Infrastructure posture	Public materials highlight NVMe storage, LiteSpeed, CloudLinux, KernelCare, DirectAdmin, backups and security tooling.	These stack choices support speed, maintainability and a more performance-focused hosting story.

What DreamIT Host offers

Hosting and infrastructure

- Business web hosting for WordPress, Magento and general websites
- Email hosting and premium SMTP capabilities through Dream Relay
- Reseller hosting for agencies and IT providers
- VPS and managed server options for higher-demand workloads
- CDN services to improve speed and content delivery reach

Who it suits

- Australian small businesses that want local support
- Agencies and designers managing multiple customer websites
- eCommerce sites that need stronger performance headroom
- Organisations moving away from impersonal mass-market hosts

Operational features

- Free migrations for websites, files and email
- Hourly, daily, weekly and monthly backup retention referenced publicly
- SSL, DNS and account management features for everyday business use
- 400+ one-click apps and WordPress staging or cloning on hosting plans

Commercial story

DreamIT Host appears to sell on value rather than just on headline price. The stronger story is not "cheapest host". It is "Australian service, practical performance, and migration support without making customers do the hard part alone".

Why clients choose DreamIT Host

Local support with named accountability

Many hosting providers compete on price while pushing support offshore or making it hard to escalate. DreamIT Host publicly leans into Melbourne-based support, which is a meaningful commercial differentiator for customers that value responsiveness and clarity.

Migration and continuity focus

Free migration support and visible backup positioning reduce the fear of switching providers. For many customers, the real blocker is not price. It is the perceived pain of moving.

Performance-oriented hosting stack

Public materials highlight NVMe storage, LiteSpeed, CloudLinux, DirectAdmin, security tooling and AMD EPYC based server hardware. That gives the business a credible performance and reliability narrative for business websites.

Broad enough to grow with the client

A customer can start with standard hosting, add email or reseller capabilities, move into VPS or managed services, and stay within one brand relationship instead of replatforming every time needs change.

Key business strengths

- Australian ownership and Melbourne support provide a simple trust signal.
- Service breadth supports both direct customers and agency or reseller channels.
- Migration, backup and security messaging address the main fears buyers have when changing hosts.
- DirectAdmin, LiteSpeed and NVMe help position the service as practical and performance-focused rather than generic.

Infrastructure and support footprint

Capability	Public detail	Client-facing implication
Server location options	Melbourne, Sydney, Perth and Auckland are listed as available server locations.	Clients can choose geography closer to their users or operational preference.
Support channels	Ticketing through My DreamIT, live chat, email and published phone support availability.	There is a clearer escalation path than with low-touch providers that only expose a knowledge base.
Security and platform tooling	CloudLinux, KernelCare, security controls, malware scanning and backup tooling are all featured in hosting materials.	Useful for clients who care about patching discipline, isolation and faster recovery from issues.
CDN and content delivery	The public site promotes a premium CDN offer and WordPress integration.	Supports a stronger story for speed-sensitive sites and distributed user bases.

Business growth timeline

2014

DreamIT Solutions begins

Origins in WordPress and WooCommerce website work before the hosting business was formally launched.

2016

DreamIT Host launches

The public history states the hosting brand launched to address a gap for reliable Australian web and email hosting for small businesses.

2017 - 2021

Platform expansion

Reseller hosting, Dream Relay, infrastructure rebuilds, Auckland expansion, DNS upgrades and DirectAdmin platform growth all appear in the published business timeline.

2025

Regional Victoria expansion

The About page says DreamIT Host expanded into Geelong to provide local hosting, managed services and IT support to regional Victorian businesses.

Recommended use cases for this proposal

Sales conversations

Use this document as a concise business introduction for prospects comparing Australian providers or asking what makes DreamIT Host different from a mainstream budget host.

Partnership and referral introductions

It also works as a lightweight capability statement for agencies, IT consultants and referral partners who want to understand the service breadth quickly.

Next-step recommendation: if you want this turned from a general business proposal into a true sales document, the next version should be tailored to one audience - for example agencies, local SMBs, eCommerce merchants, or managed IT clients.

This proposal is based on public DreamIT Host website content reviewed on 2 June 2026, including the home page, About page and web hosting pages.
